

## ELASTIC ON A REEL

The elastic cord is mainly used to secure and maintain protective coverings under tension, such as hail nets and anti-rain films, absorbing the stresses exerted on them.

Its elasticity, in fact, reduces the risk of tearing compared to rigid ropes.

It features a black latex core and a PE/PET HT sheath that protects against UV rays, moisture, and wear over time.

The different diameters (6, 8, 9 mm) allow it to be adapted to both lighter and more robust structures.

## TECHNICAL INFORMATION

|                                         |
|-----------------------------------------|
| Material: nr. 40 strands of black latex |
| Yarn type: high-density polyethylene    |

Three versions available:

- Elastic, 200% stretch, Ø 9 mm
- Elastic, 150% and 100% stretch, Ø 8 mm

Other options available upon request

## PACKAGING:

Minimum package: 300 m (Ø 6) / 250 m (Ø 8) / 200 m (Ø 9)

Pallet quantity: 30.000 m (Ø 6) / 25.000 m (Ø 8) / 20.000 m (Ø 9)
